ORACLE Client Tools 2 (ORAT2) Segment Abstract
for HP-UX

ORACLE RDBMS Version 7.3.2

PURPOSE:

Oracle is a COTS relational database management system used to provide data management services within the DII COE Infrastructure Services. Oracle is a full-featured relational database management system. It uses the Structured Query Language (SQL) as its command language complemented with Oracle's procedural language PL/SQL. It provides data storage and retrieval services, network connectivity, and database administrator support services.

The Oracle Client Tools 2 (ORAT2) Segment includes the runtime files that provide forms, menus and report functionality. The report utility is a module that defines all of the information about itself, including its history, page size, references to other modules, and use of report-level objects. The forms utility is a default layout style in which labels appear to the left of fields, and each record prints on a separate logical page. The menu function is simply a list of available choices from which you can choose what action to take next or what interface element to access next.

EXAMPLE APPLICATION:

The Oracle Client Tools 2 (ORAT2) Segment includes the runtime files that provide forms, menus and report functionality. The report utility is a module that defines all of the information about itself, including its history, page size, references to other modules, and use of report-level objects. The forms utility is a default layout style in which labels appear to the left of fields, and each record prints on a separate logical page. The menu function is simply a list of available choices from which you can choose what action to take next or what interface element to access next.

PRODUCT QUALIFICATION:

Oracle has been available as a DII COE Infrastructure Service since the COE's inception. It is one of several COTS DBMS products accepted for use within the DII COE to provide database management services.

IMPLEMENTATION ISSUES:

Oracle operates with the following configuration and memory requirements. These requirements apply to the ORACLE Client Tools 2 Segment. Other configurations will have different disk and memory requirements that will be identified in their respective segments.

VERSION: 1.0.0.0
CPU: Hewlett-Packard
DISK:153600
MEMORY: 8192

PRODUCT CONSTRAINTS AND LIMITATIONS:

None.

DEPENDENCIES:

HP-UX: 10.20
Oracle RDBMS 7.3.2.3

LEGAL RESTRICTIONS:

The Oracle RDBMS is the property of Oracle Corporation. Installation and execution of this segment is authorized for properly licensed users only. This product is provided in segment form for use within the DII COE as a service to COE developers and users. Developers and users are responsible for making their own licensure arrangements with Oracle Corporation unless DISA or some other Government agency has expressly arranged licensure on their behalf.

MISCELLANEOUS:

Executive Agent: DISA
Service POC: Unsupported
